

Amendments to the Claims:

This listing of claims will replace all prior versions and listings of claims in the application.

Claims 2 and 10 are canceled without prejudice or disclaimer.

Claims 1, and 4-9 are amended.

Claim 11 is new.

Listing of Claims:

1. (Currently Amended) Method for inspecting packagings for a liquid product, ~~such as drinks,~~
comprising ~~steps for:~~

- setting a packaging into rotation,
- irradiating the packaging during the rotation with a radiation of a predetermined wavelength,
- making at least one series of at least two recordings of at least a part of the content of the packaging during the rotation, ~~this~~ with an image recording device suitable for making recordings at the predetermined wavelength, wherein the packaging is situated in substantially the same rotational position relative to the recording device during successive recordings of the series.

2. (Canceled) Method as claimed in claim 1, wherein the packaging is situated in substantially the same rotational position relative to the recording device during successive recordings of the series.

3. (Original) Method as claimed in claim 1, wherein successive recordings of the series are made with an intervening time interval of a predetermined duration.

4. (Currently Amended) Method as claimed in ~~one or more of the foregoing claims~~ claim 1, wherein the rotation speed is varied during the period in which the recordings of a series are made.

5. (Currently Amended) Method as claimed in ~~one or more of the foregoing claims~~ claim 1, wherein the rotation direction is varied during the period in which the recordings of a series are made
6. (Currently Amended) Method as claimed in ~~one or more of the foregoing claims~~ claim 1, wherein a plurality of series of recordings are made wherein recordings of the same rank from different series are made successively.
7. (Currently Amended) Method as claimed in ~~one or more of the foregoing claims~~ claim 1, comprising steps for comparing the image information from the images of a series in order to detect the presence of undesired particles, such as glass particles, in the packaging.
8. (Currently Amended) Method as claimed in ~~one or more of the foregoing claims~~ claim 1, wherein the image recording device ~~is~~ comprises a camera ~~which is~~ activated to make a recording by a signal supplied from outside the camera.
9. (Currently Amended) Method as claimed in ~~one or more of the foregoing claims~~ claim 1, wherein during performing of the method a packaging is placed in a holder comprising a drive unit, radiating means for generating the radiation, and position-determining means for determining the rotational position of the packaging.
10. (Canceled) System for performing a method as claimed in one or more of the foregoing claims.
11. (New) System for performing a method as claimed in claim 1, the system comprising:
a rotator for rotating the packaging;
radiating means for irradiating the packaging during the rotation with radiation of a predetermined wavelength,
an image recording device suitable for making recordings at the predetermined wavelength for making at least one series of at least two recordings of at least a part of the content of the packaging during the rotation,

orientation determining means for determining the rotational position of the packaging for making successive recordings of the content of the packaging in substantially the same orientation.
